

# *Austrian vehicle fleet scenarios to reach climate neutrality and CRM demand*

*Martin Beermann, Gerfried Jungmeier*

*Final Workshop  
Task 40 CRM4EV  
29.04.2022, online*

# Austria's 2030 Mobility Master Plan (BMK, 2021)

## Target pathway to climate-neutral transport by 2040

Sources:

2019: Österreichische Luftschadstoffinventur 1995-2019 (Austrian air-pollutant emission inventory), Environment Agency Austria 2021  
Zielpfad bis 2040: Klimaneutralität im Verkehr – Transition Mobility 2040 (Pathway to 2040: Climate Neutrality in the Transport Sector – Transition Mobility 2040), Environment Agency Austria 2021

# OEM targets

# Passenger vehicle fleet model Austria: 2 scenarios to reach climate neutrality in 2040/2050: „BEV“ and „e-Fuel“

- **GHG reduction goals**
  - 2030: Austria about 55% reduction (based on 1990)
  - 2040: Austria „climate neutral“ transportation sector
  - 2050: EU and USA climate neutral
  - 2060: Rest of the world climate neutral
- **Fleet modelling** with NEMO (Network Emission Model) used for OLI (Österreichische Luftschadstoff-Inventur)
- **Different shares of new registrations** from 2021:
  - BEV and ICE/PHEV
  - Only **domestic passenger vehicles** (without „tank tourism“)
  - **Vehicle fleet:** constant from 2025
  - **Total annual kilometres:** constant from 2020
- **Renewable electricity** for BEV generated in new power plants in Austria/abroad integrated in existing renewable electricity mix
  - CO<sub>2</sub>-sources for **e-Fuels**:
    - 50 – 100 kt/a from biomass (e.g. fermentation, combustion)
    - > 100 kt/a from air
- **Amount of biofuels** for passenger vehicles remain constant from 2020 (about 250 kt)
  - **Cooperation**
    - JOANNEUM RESEARCH (LCA & modelling)
    - Graz University of Technology (vehicle fleet)
- IEA HEV Task 30 and Task 40 (methodology)

# Yearly GHG-emissions of passenger vehicle fleet in Austria

from 1990 to 2050, based on LCA

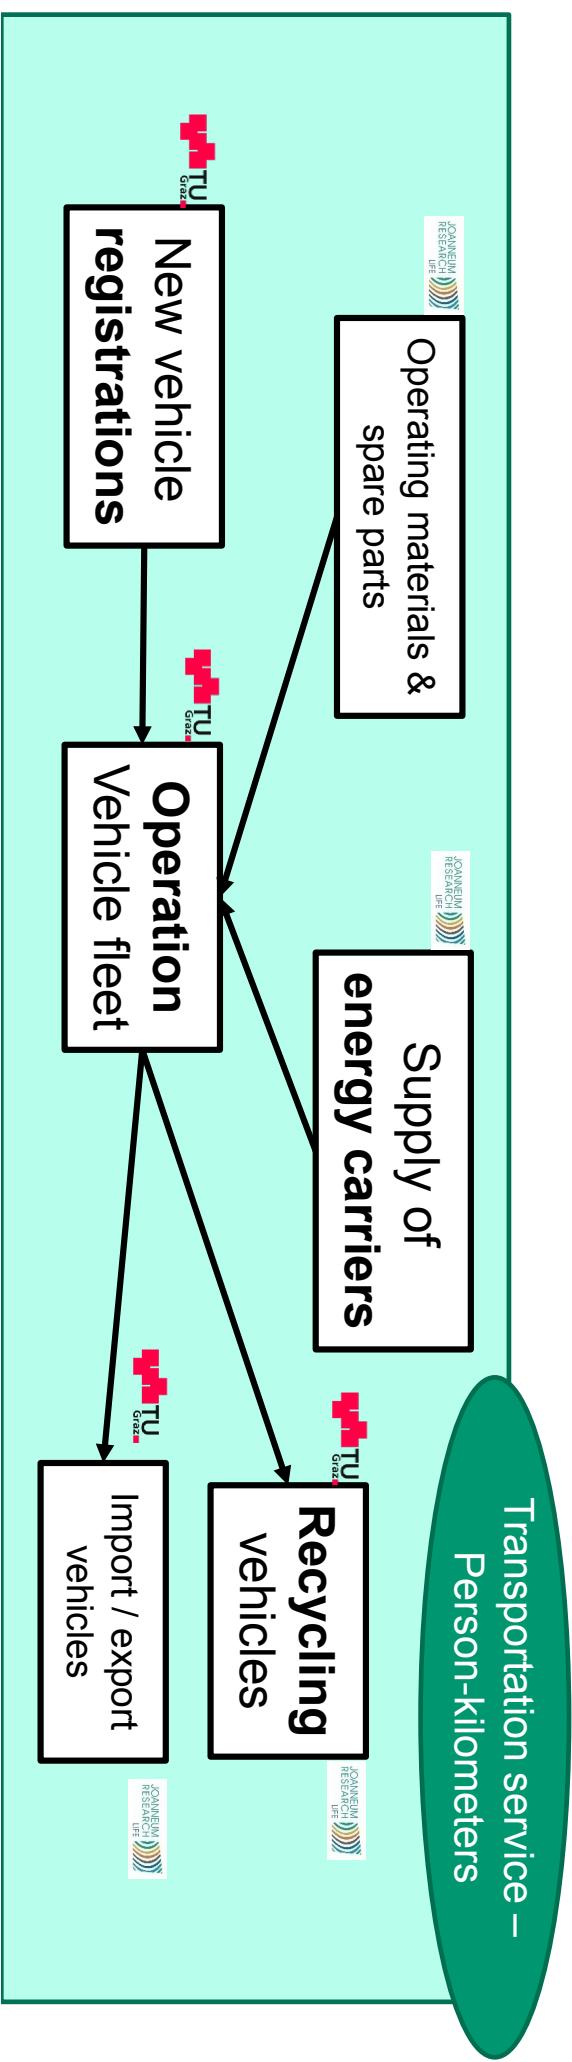

- Vehicle production of new registered passenger cars
- Imported second use vehicles

## Operation of vehicle fleet

- Supply of energy carriers
- Operating materials and spare parts
- Direct vehicle emissions

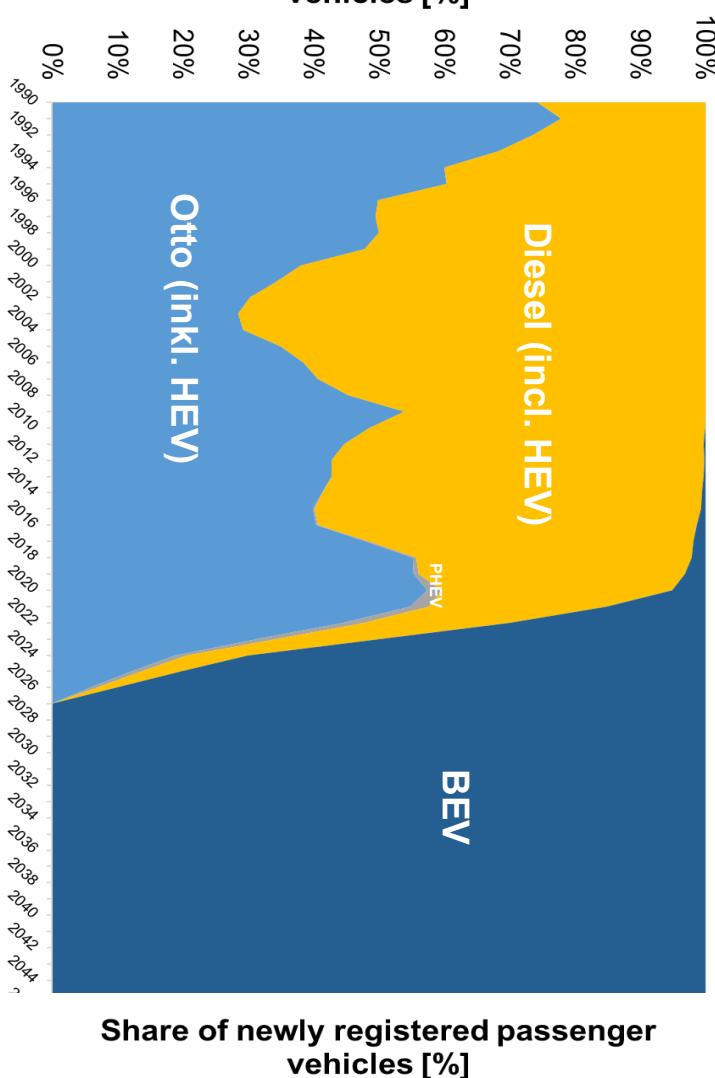

## Vehicle end-of-life

- Recycling
- Export of used vehicles (second life)

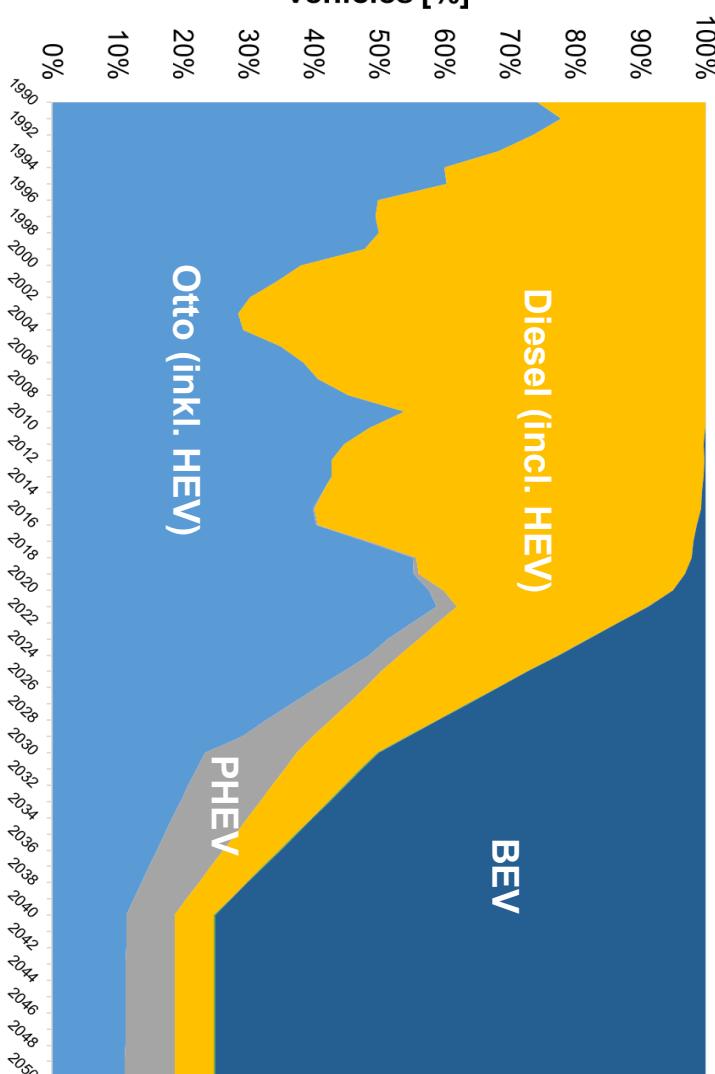

# Share of Newly Registered Passenger Vehicles

## BEV-Scenario

## e-Fuel-Scenario

2028+: 100% BEV

2040+: 25% ICE/PHEV

# Development of Passenger Vehicle Fleet

## BEV-Scenario

Share ICE:

2025

- 2030: 50%  
- 2040: 8%  
- 2050: 3%

Passenger vehicle fleet [#]

5,000,000  
4,000,000

3,000,000  
2,000,000  
1,000,000

BEV

Diesel (inkl. HEV)

PHEV

Otto (inkl. HEV)

1990 1992 1994 1996 1998 2000 2002 2004 2006 2008 2010 2012 2014 2016 2018 2020 2022 2024 2026 2028 2030 2032 2034 2036 2038 2040 2042 2044 2046 2048 2050

## e-Fuel-Scenario

Share ICE/PHEV:

2025

- 2030: 80%  
- 2040: 50%  
- 2050: 33%

Passenger vehicle fleet [#]

5,000,000  
4,000,000

3,000,000  
2,000,000  
1,000,000

BEV

Diesel (inkl. HEV)

PHEV

Otto (inkl. HEV)

More rapid fleet renewal

**1990: 2.7 Mio. passenger vehicles**  
**2019: 5.0 Mio. passenger vehicles**

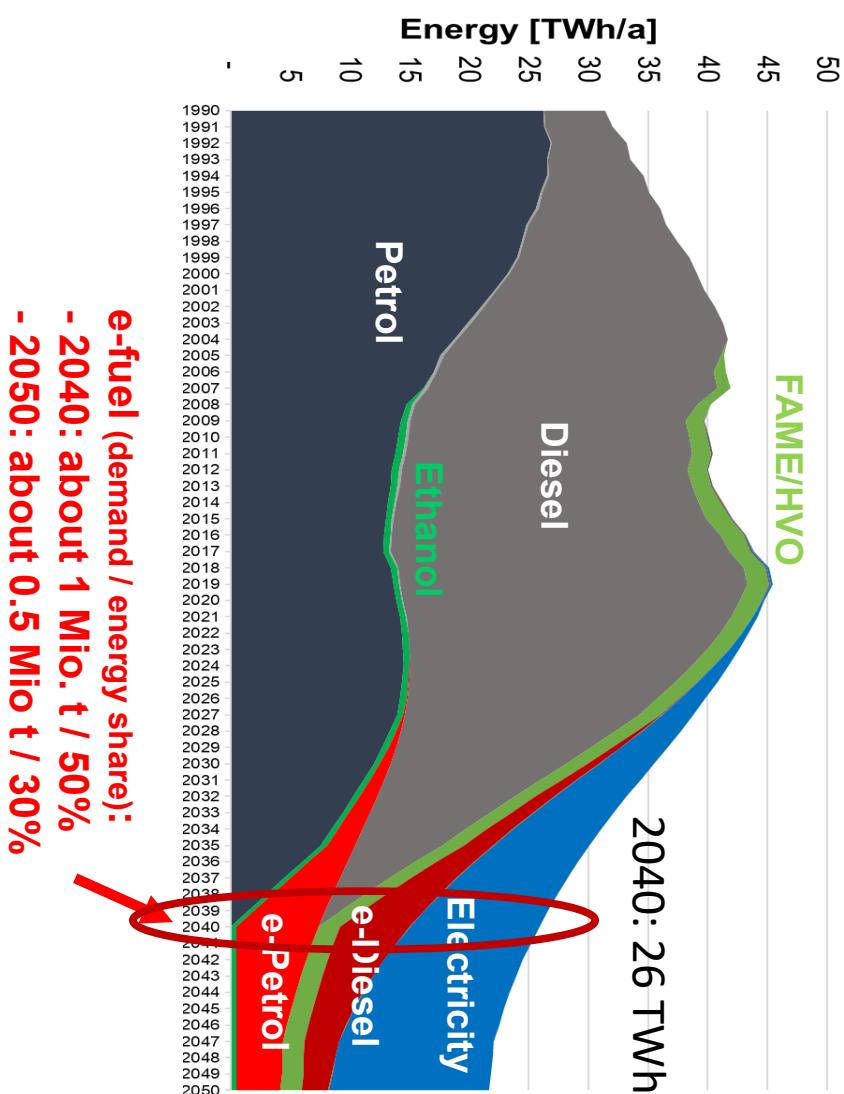

# Passenger Vehicle Energy Consumption

## BEV-Scenario

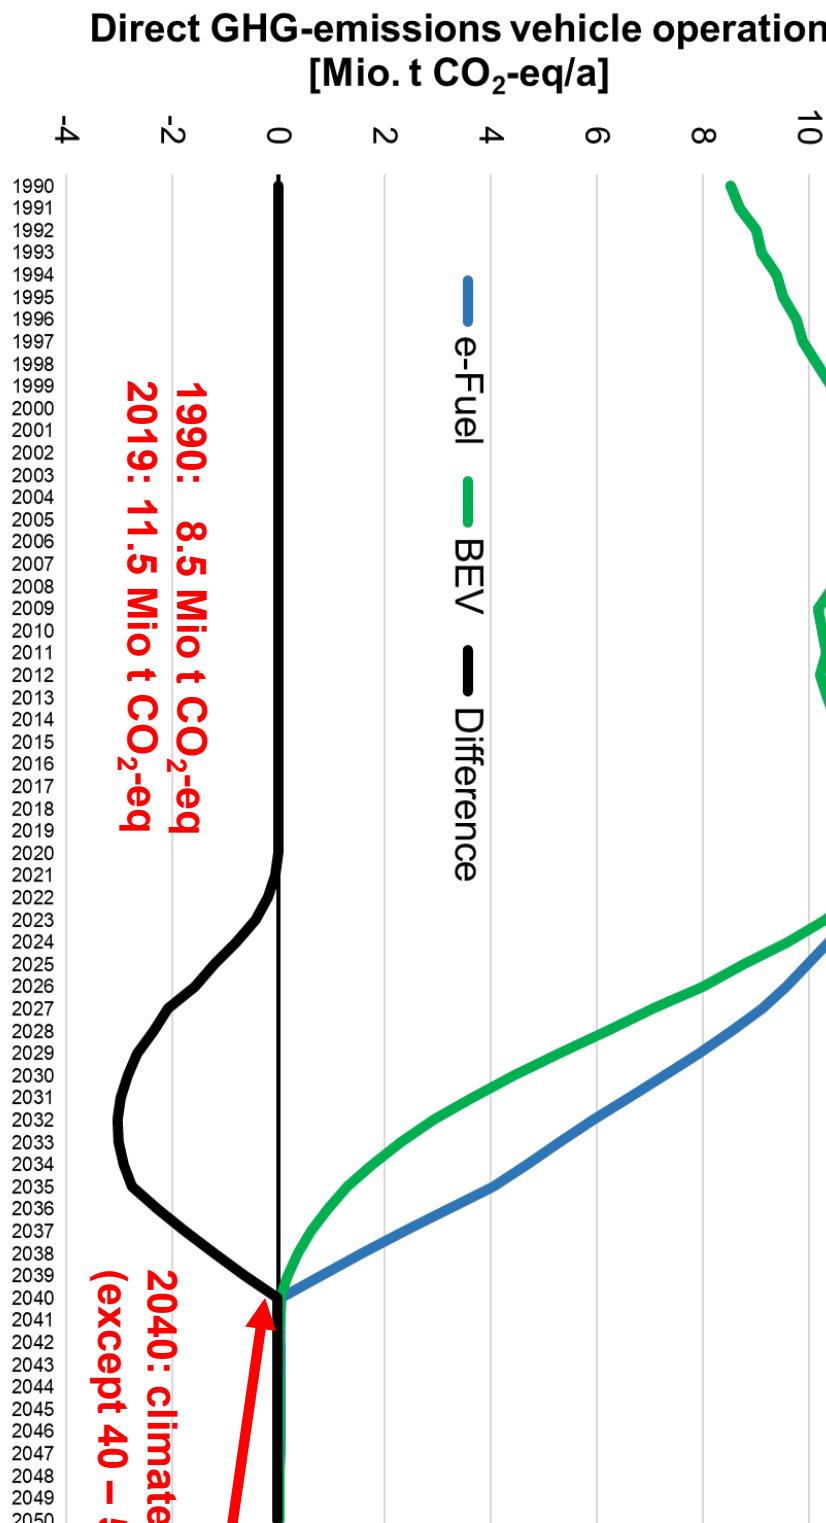

**1990: 31 TWh  
2019: 45 TWh**

## e-Fuel-Scenario

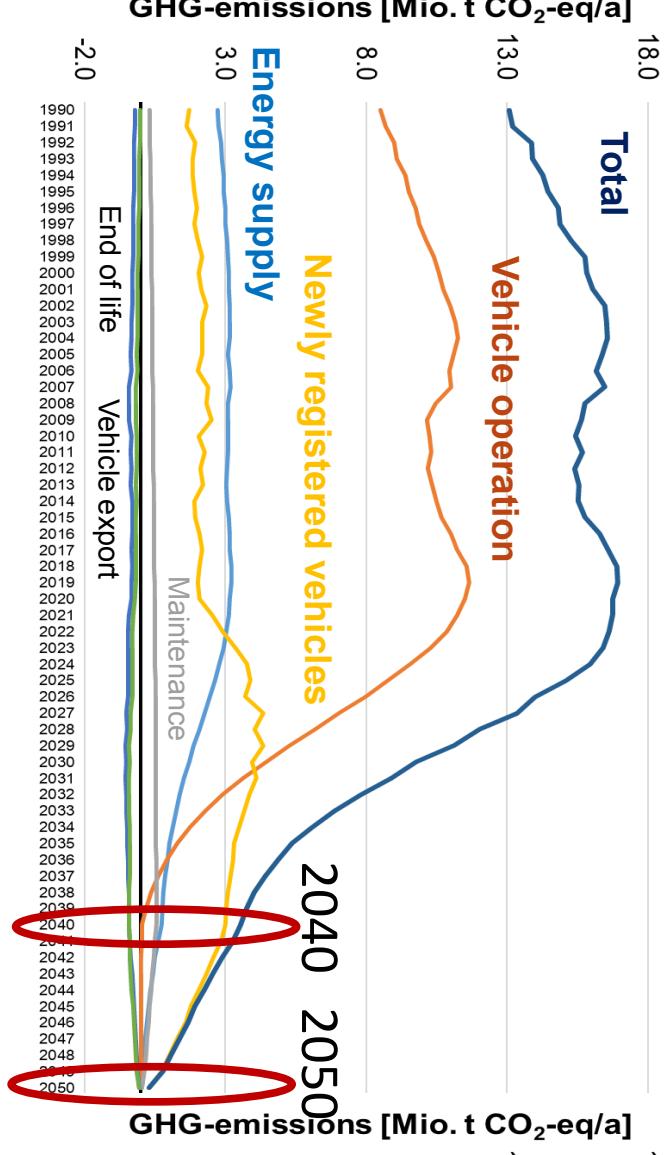

**e-fuel (demand / energy share):**  
**- 2040: about 1 Mio. t / 50%**  
**- 2050: about 0.5 Mio t / 30%**

# Direct GHG-Emissions: Passenger Vehicle Fleet Operation

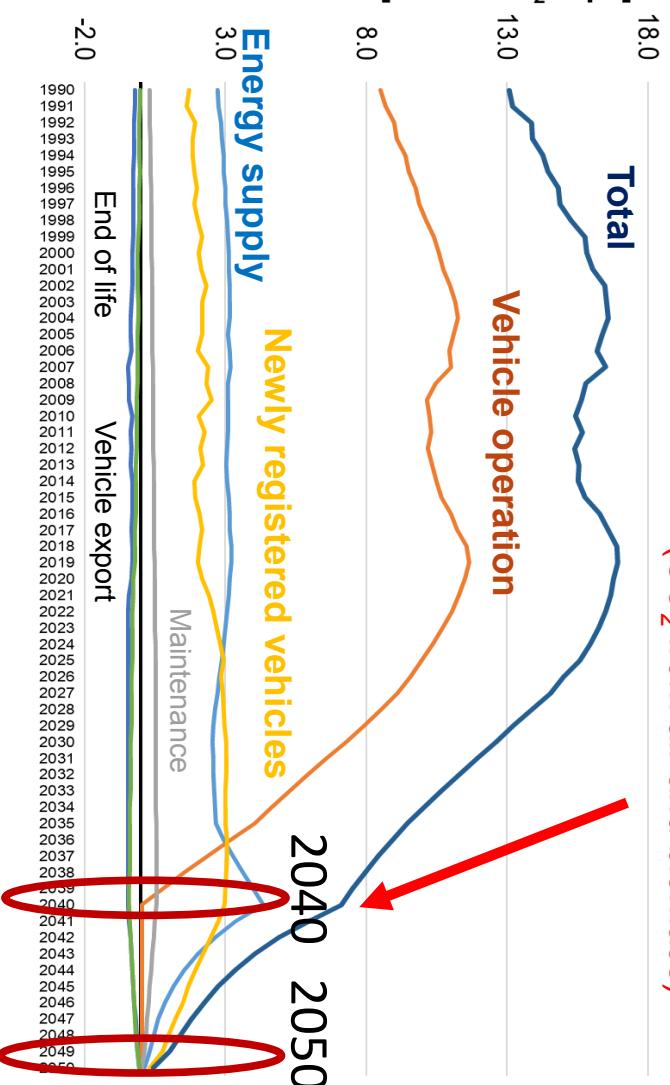

# LCA Based GHG-Emissions of Passenger Vehicle Fleet

## BEV-Scenario

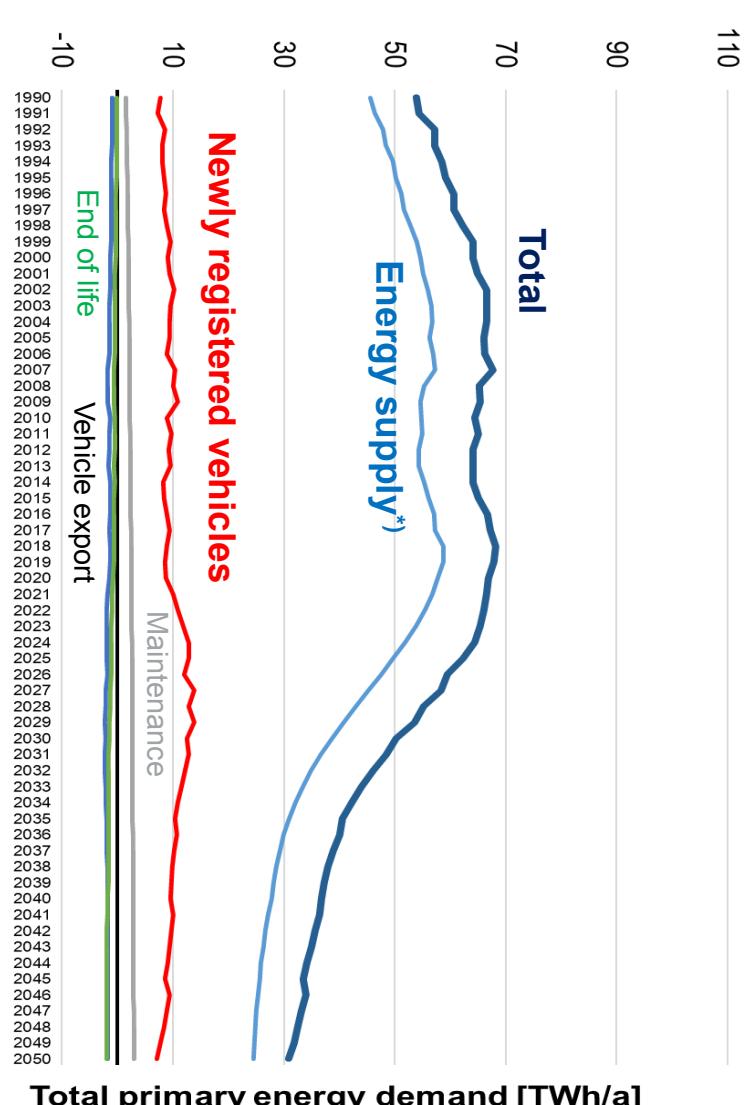

**1990: 13 Mio t CO<sub>2</sub>-eq  
2019: 17 Mio t CO<sub>2</sub>-eq**

## e-Fuel-Scenario

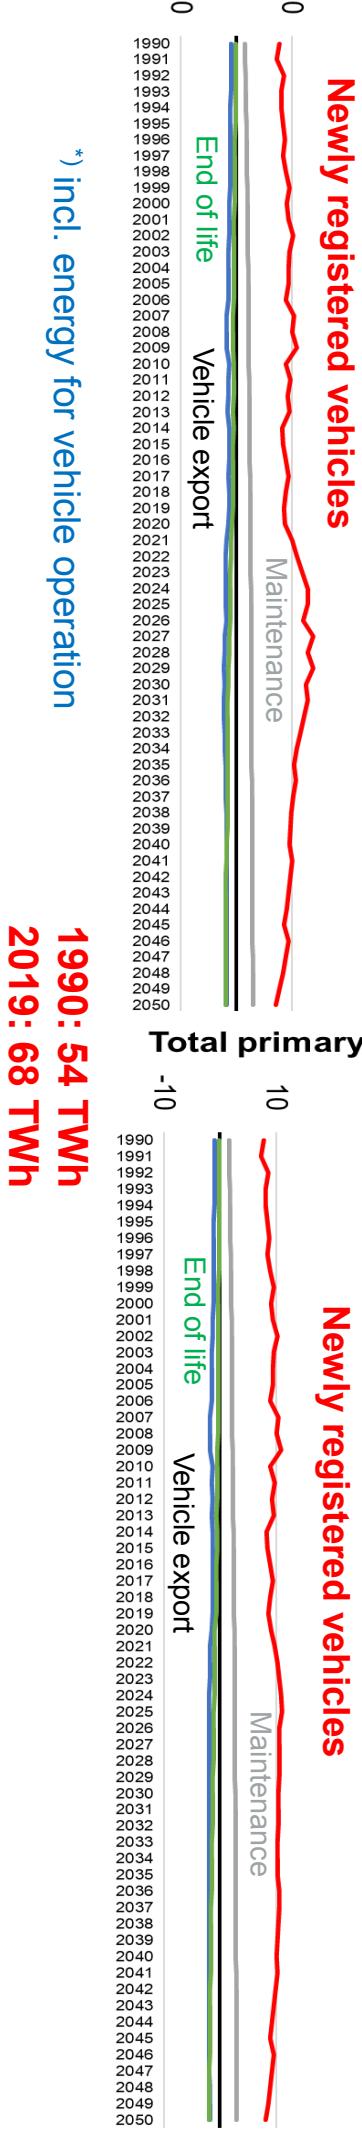

# LCA based Total Primary Energy Demand of Passenger Vehicle Fleet

## BEV-Scenario

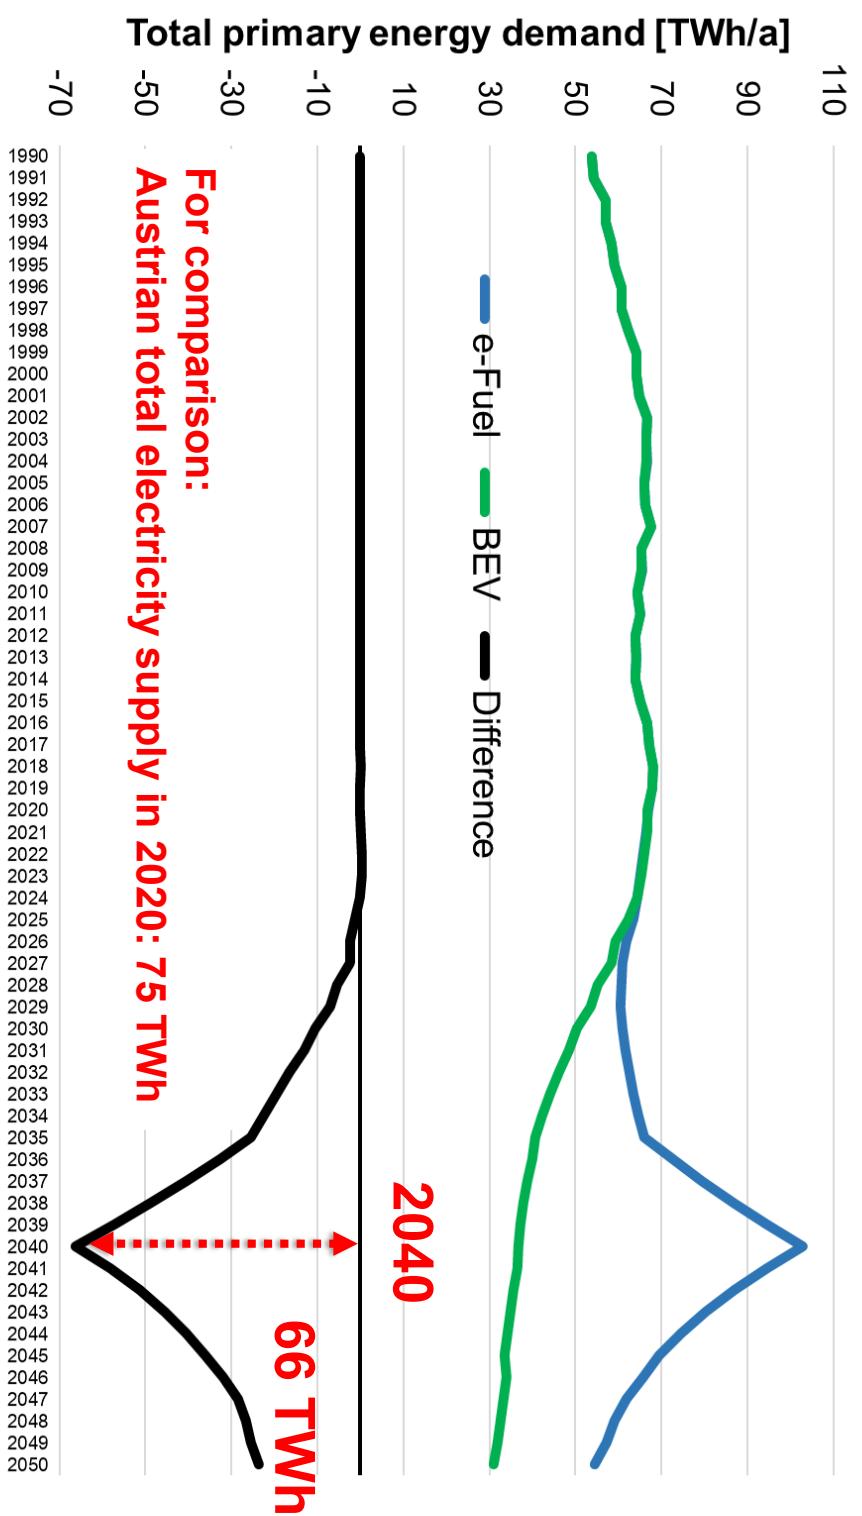

## e-Fuel-Scenario

**2040: about 1 Mio. t e-Fuel  
(CO<sub>2</sub> from air and biomass)**

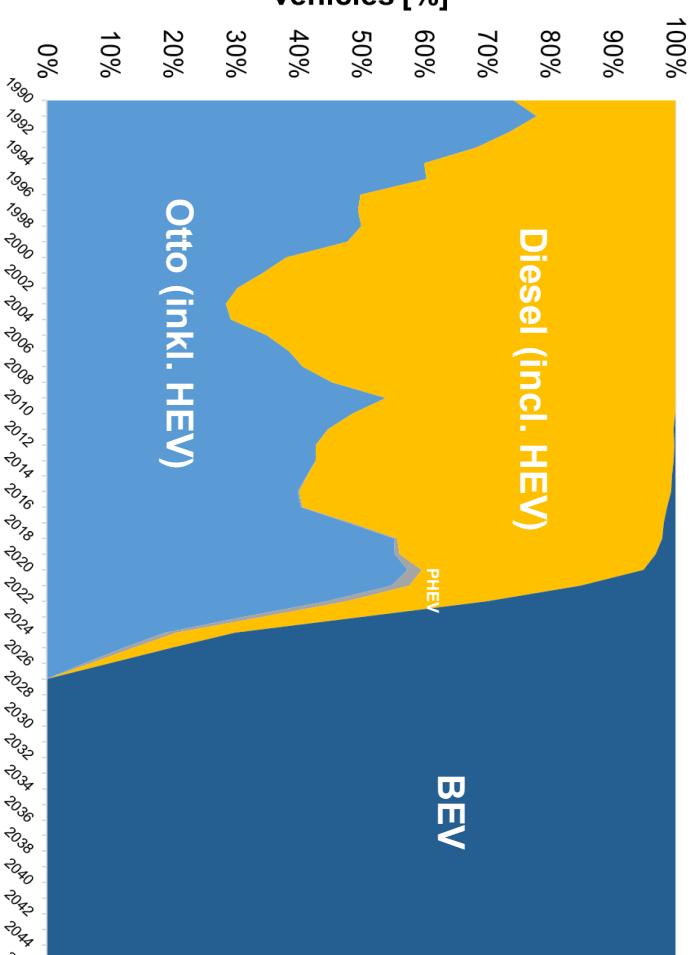

# Difference of LCA Based Total Primary Energy Demand of Passenger Vehicle Fleet

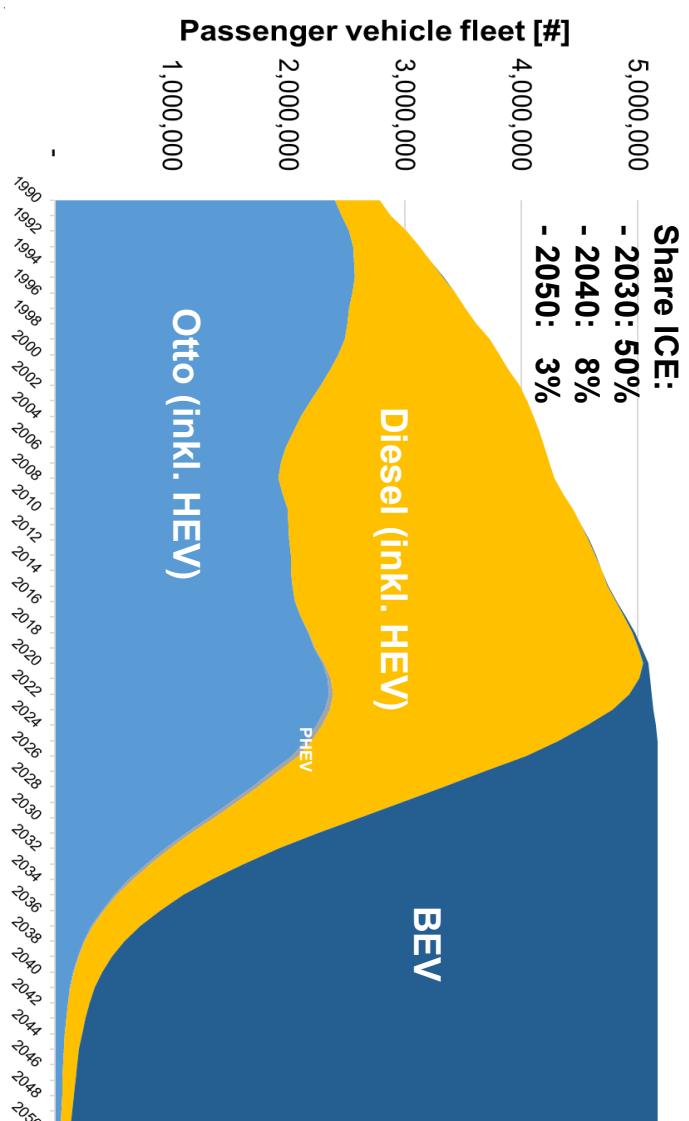

# Development of passenger vehicle fleet in Austria

## New vehicle registrations

## Vehicle fleet

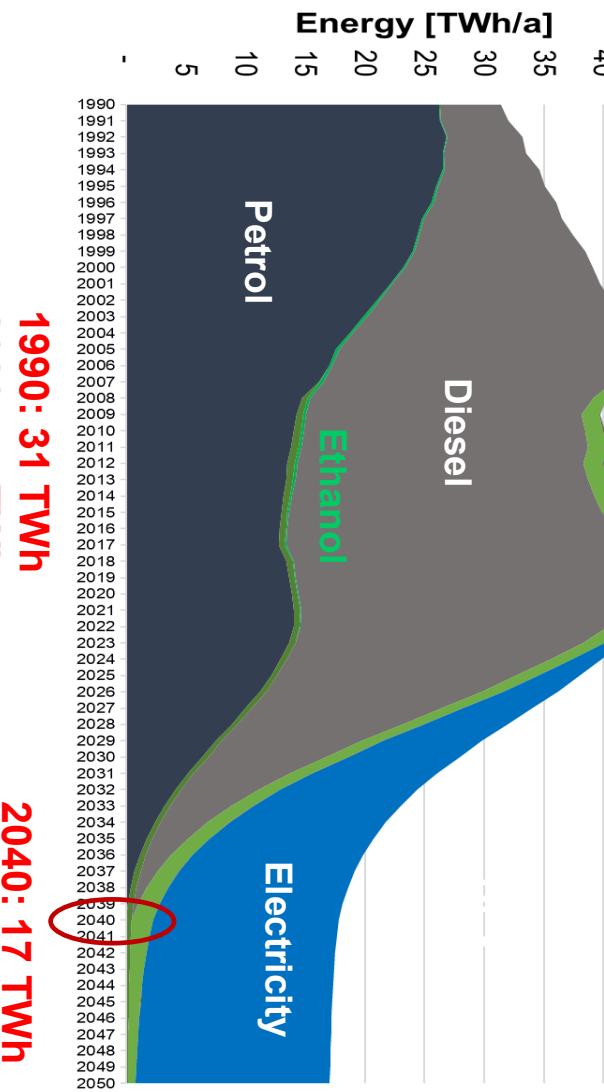

2028+: new registered vehicles: 100% BEV

2025+: constant vehicle fleet

# Passenger vehicle energy consumption BEV-scenario

## Energy consumption vehicle fleet

**100% Renewable electricity in Austria 2030**  
(based on EE-Ausbaugetz 2021)

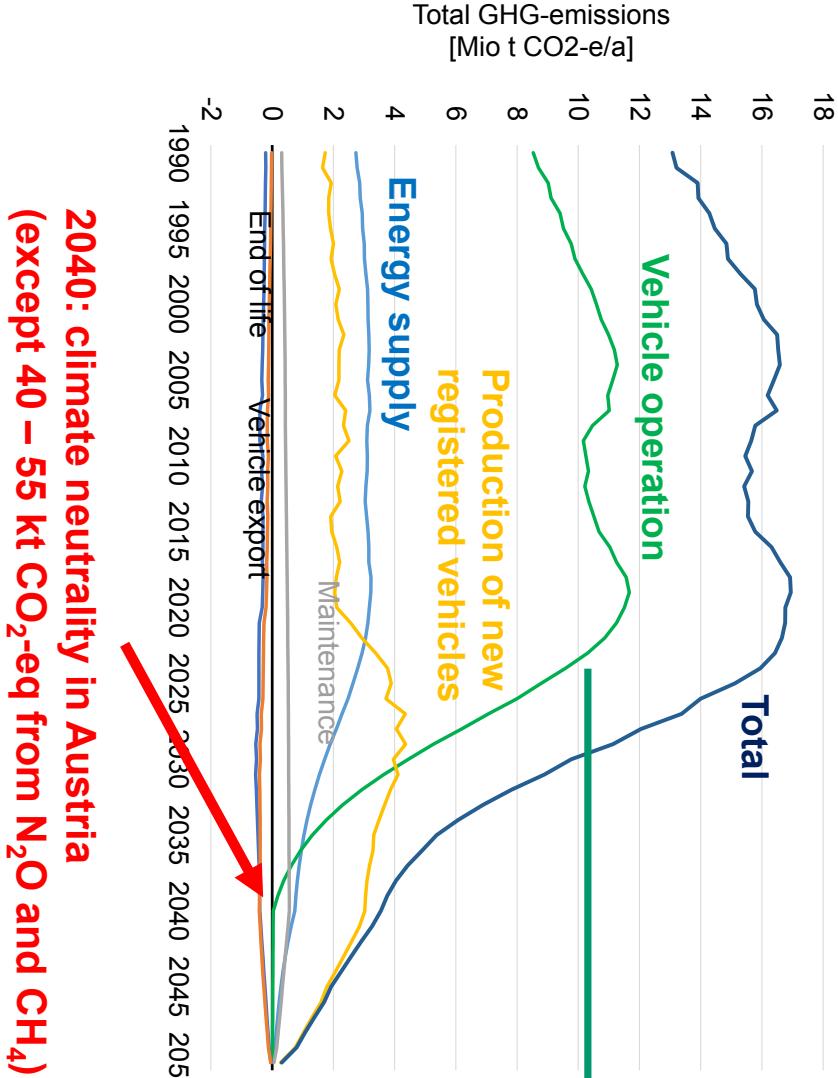

Source: Electricity supply 1.0, JOANNEUM RESEARCH

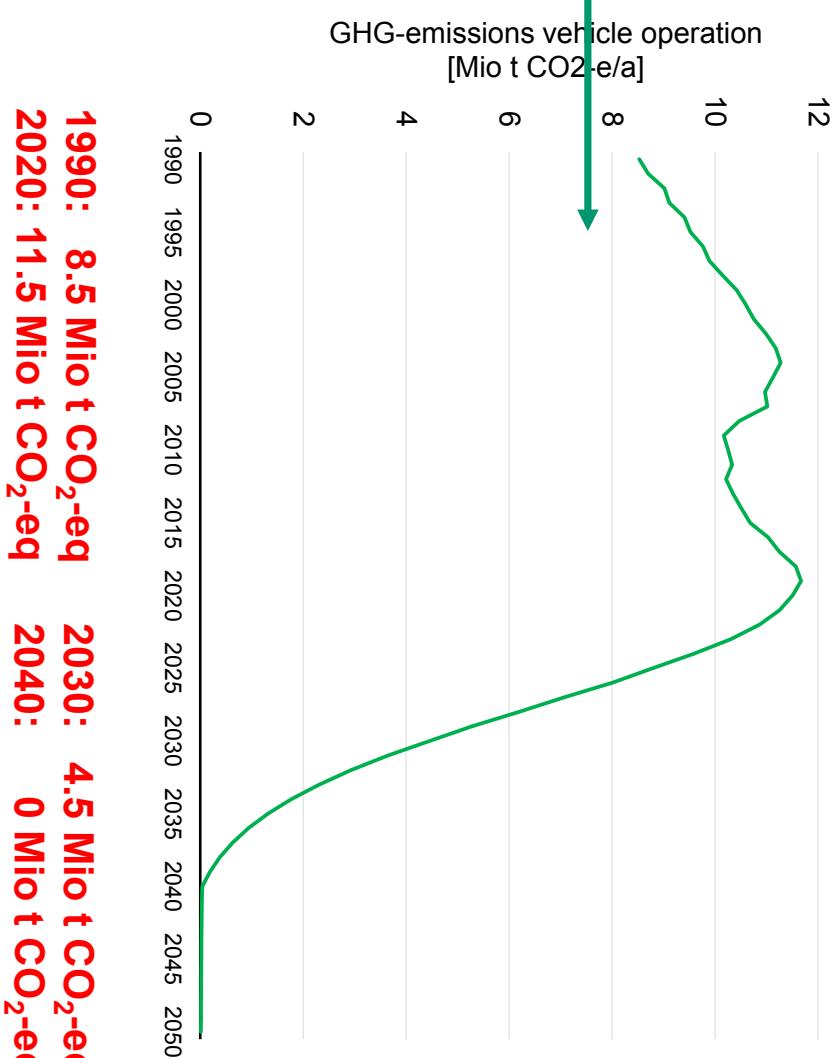

**1990: 31 TWh**  
**2020: 45 TWh**  
**2030: 27 TWh**  
**2040: 17 TWh**

# GHG-emissions of passenger vehicle fleet BEV-scenario

## Total GHG emissions of the fleet

## GHG emissions from fleet operation

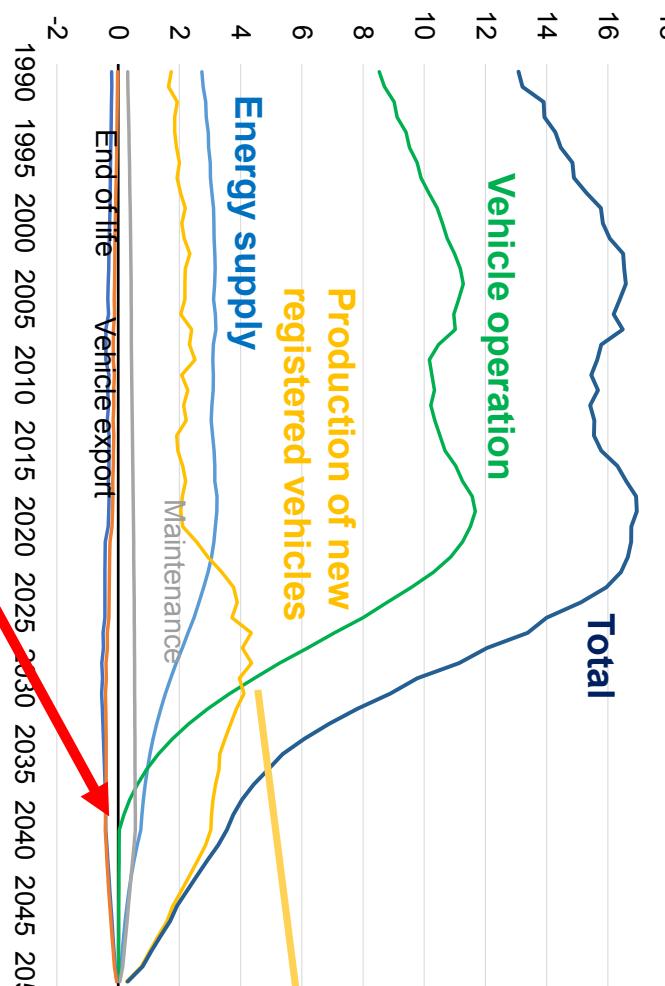

**2040: climate neutrality in Austria  
(except 40 – 55 kt CO<sub>2</sub>-eq from N<sub>2</sub>O and CH<sub>4</sub>)**

<b>1990:</b> 8.5 Mio t CO <sub>2</sub> -eq	<b>2030:</b> 4.5 Mio t CO <sub>2</sub> -eq
<b>2020:</b> 11.5 Mio t CO <sub>2</sub> -eq	<b>2040:</b> 0 Mio t CO <sub>2</sub> -eq

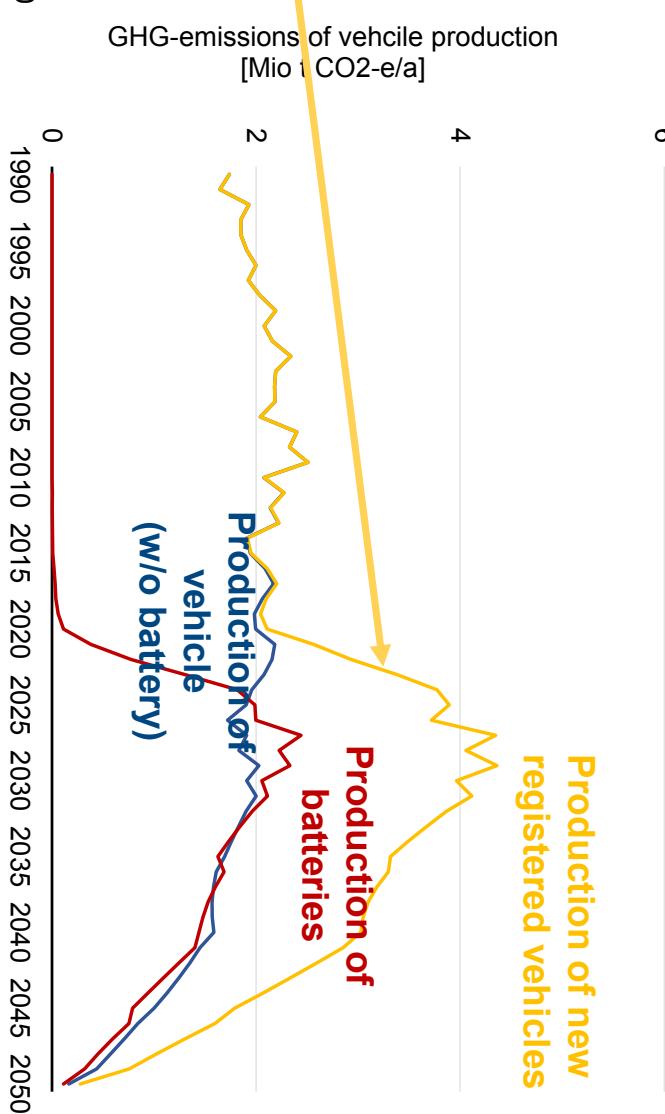

# GHG-emissions of passenger vehicle fleet BEV-scenario

## Total GHG emissions of the fleet

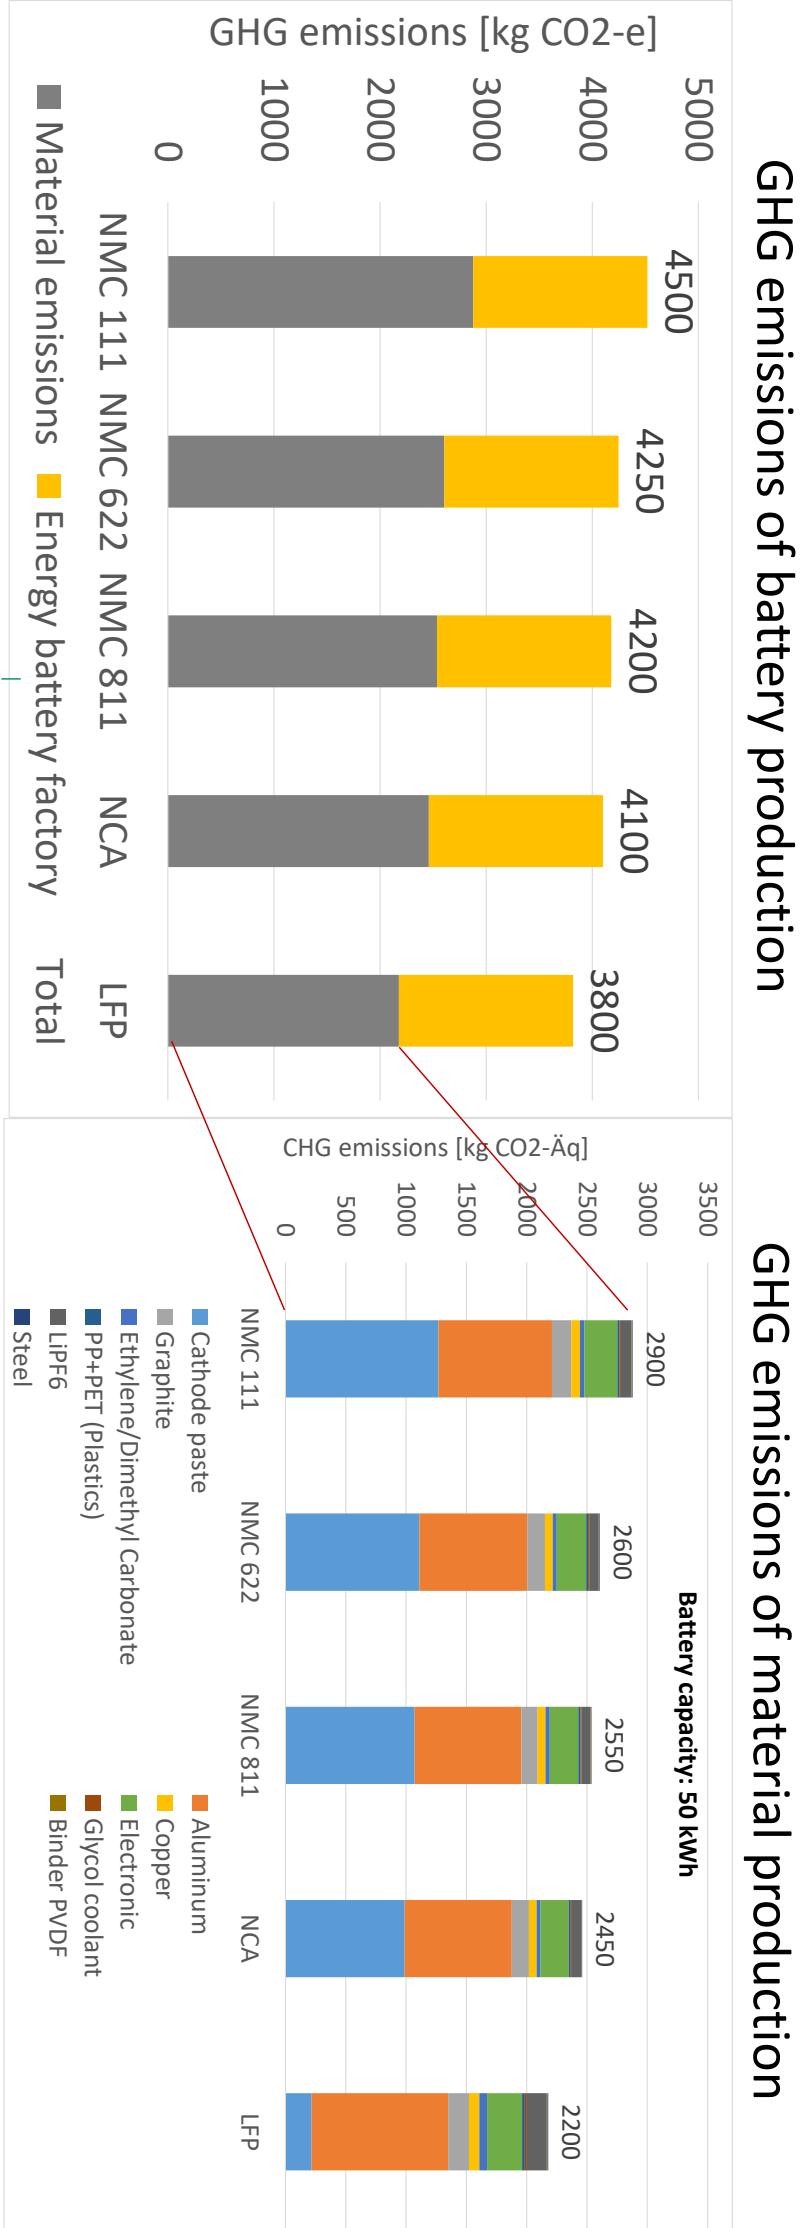

## GHG emissions of vehicle production

**2040: climate neutrality in Austria  
(except 40 – 55 kt CO<sub>2</sub>-eq from N<sub>2</sub>O and CH<sub>4</sub>)**

# GHG emissions of battery pack production (example 50 kWh, China, 2020)

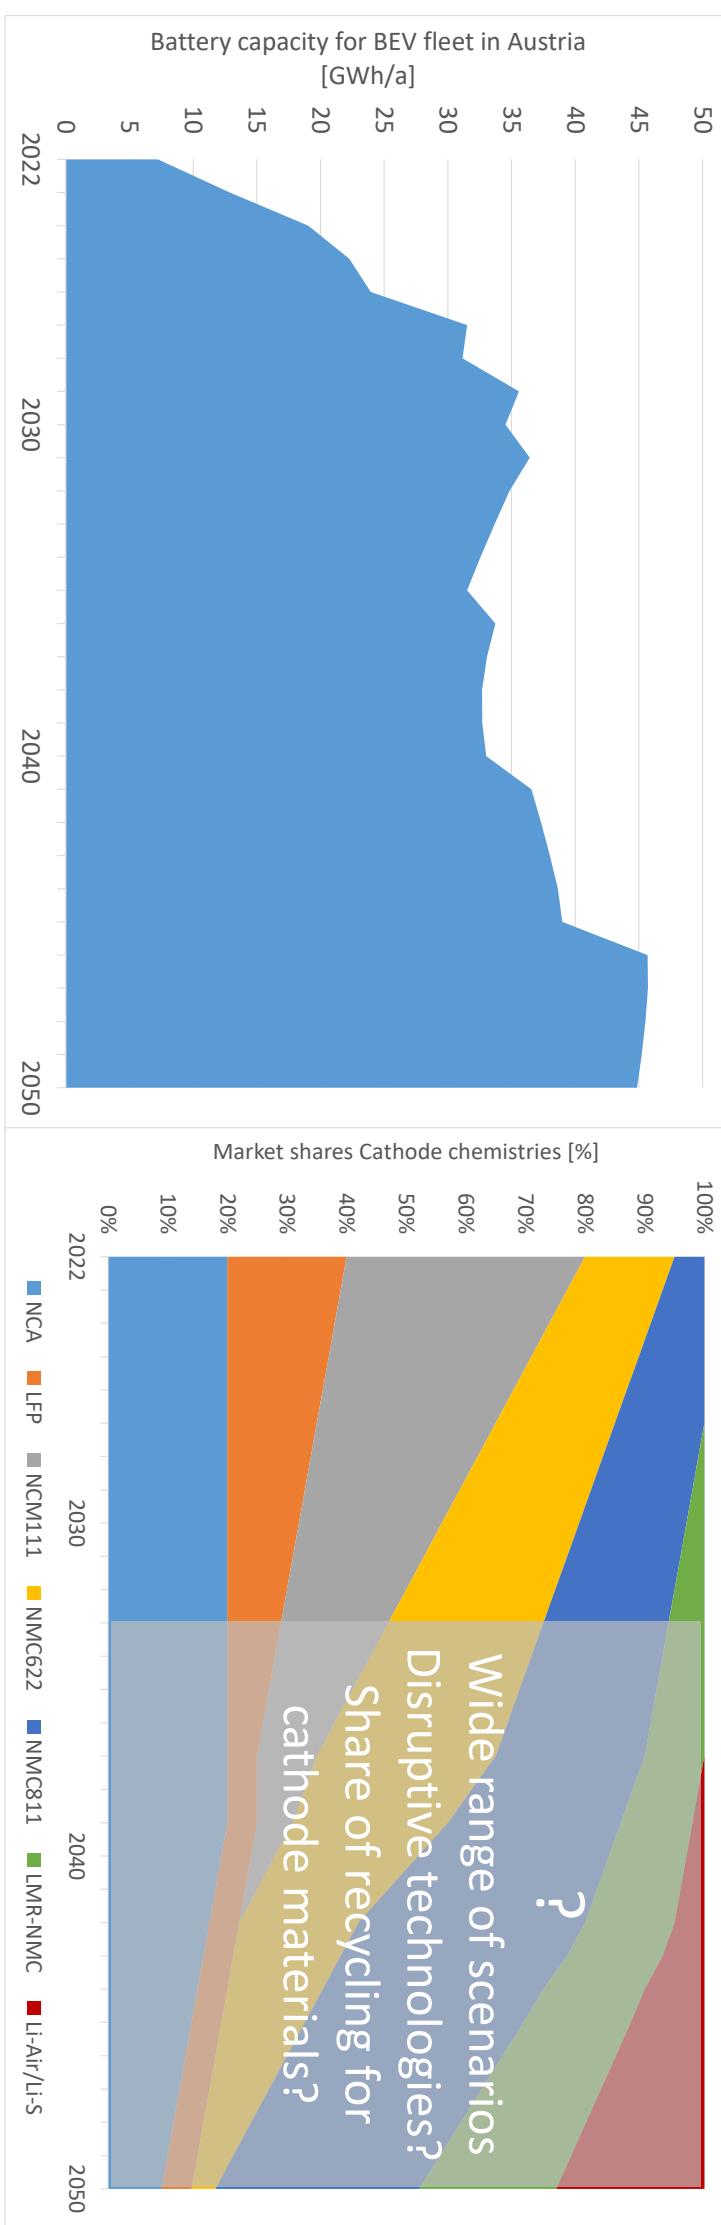

Energy demand battery factory: 55-65 kWh / kWh battery capacity

Source: Battery Lifecycle model, Joanneum Research

# Batteries for BEV scenario

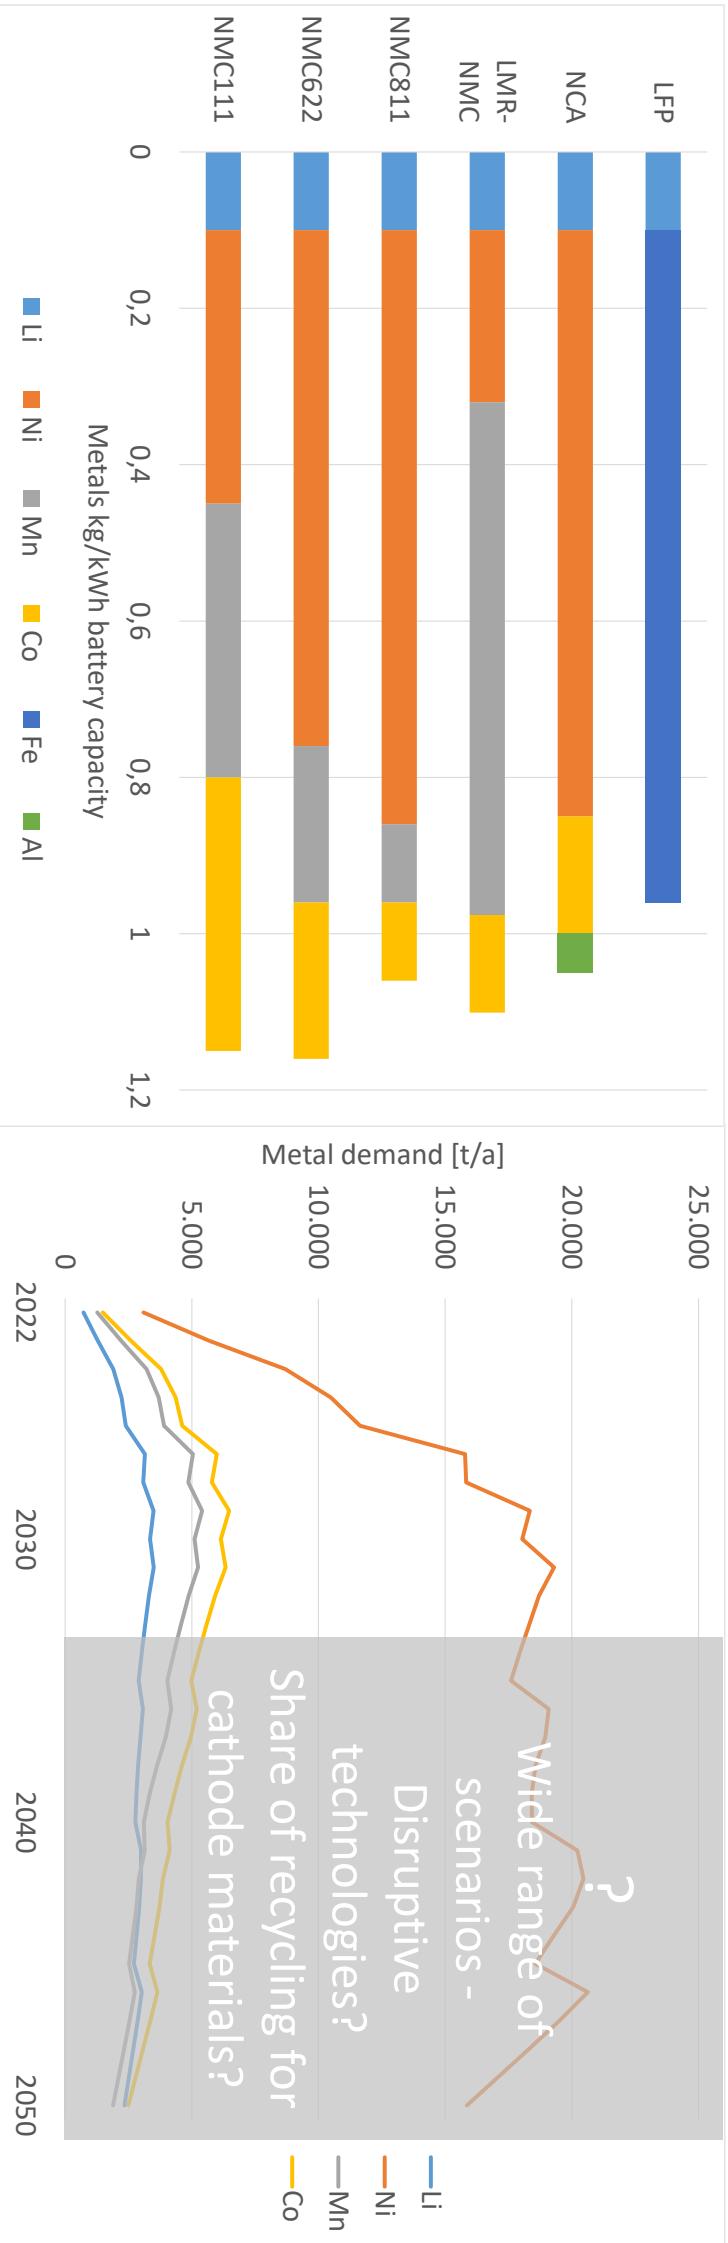

## GWh battery capacity for the BEV fleet in Austria

## Market shares of cathode chemistries

# Critical raw material demand for BEV fleet

## Metal demand for cathode chemistries NMC-scenario with 60-70% NMC batteries

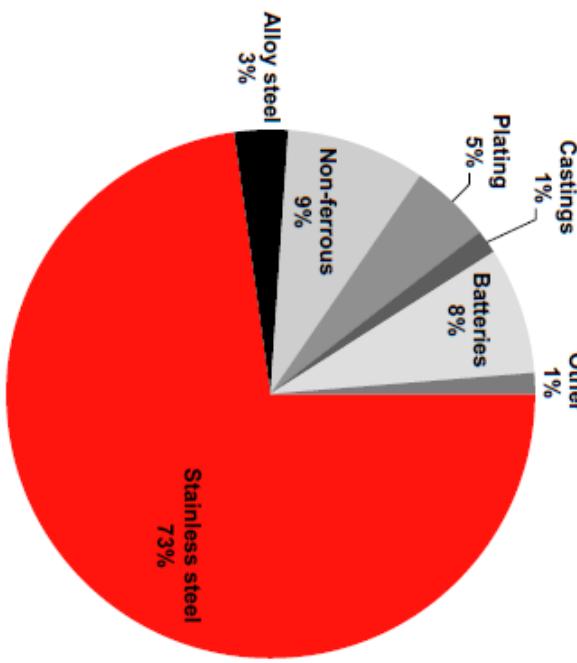

Example Nickel: Future demand BEV fleet in Austria ~ 18-20 kt/a  
Today's demand by industry in Austria ~ 24 kt/a

(Source: Country factsheet Ni-Institute)

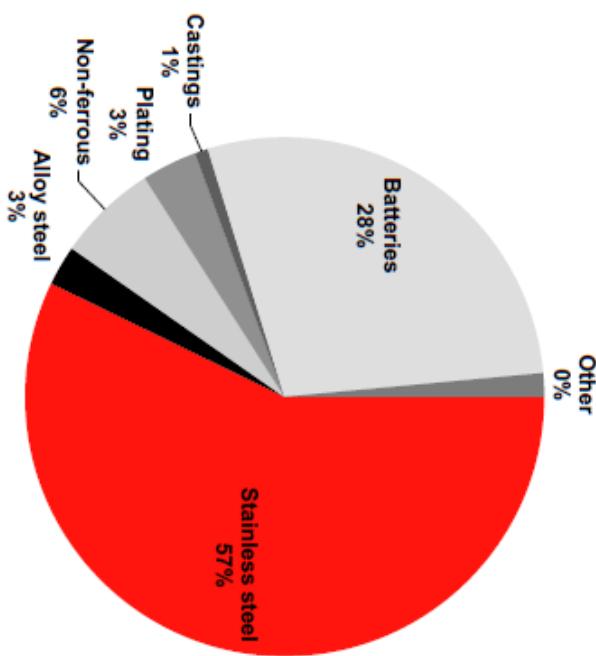

# *Future Nickel supply for batteries*

Batteries to become almost 30% of nickel market by 2030

Global nickel consumption by first use, 2020  
Total market: 2.4mt

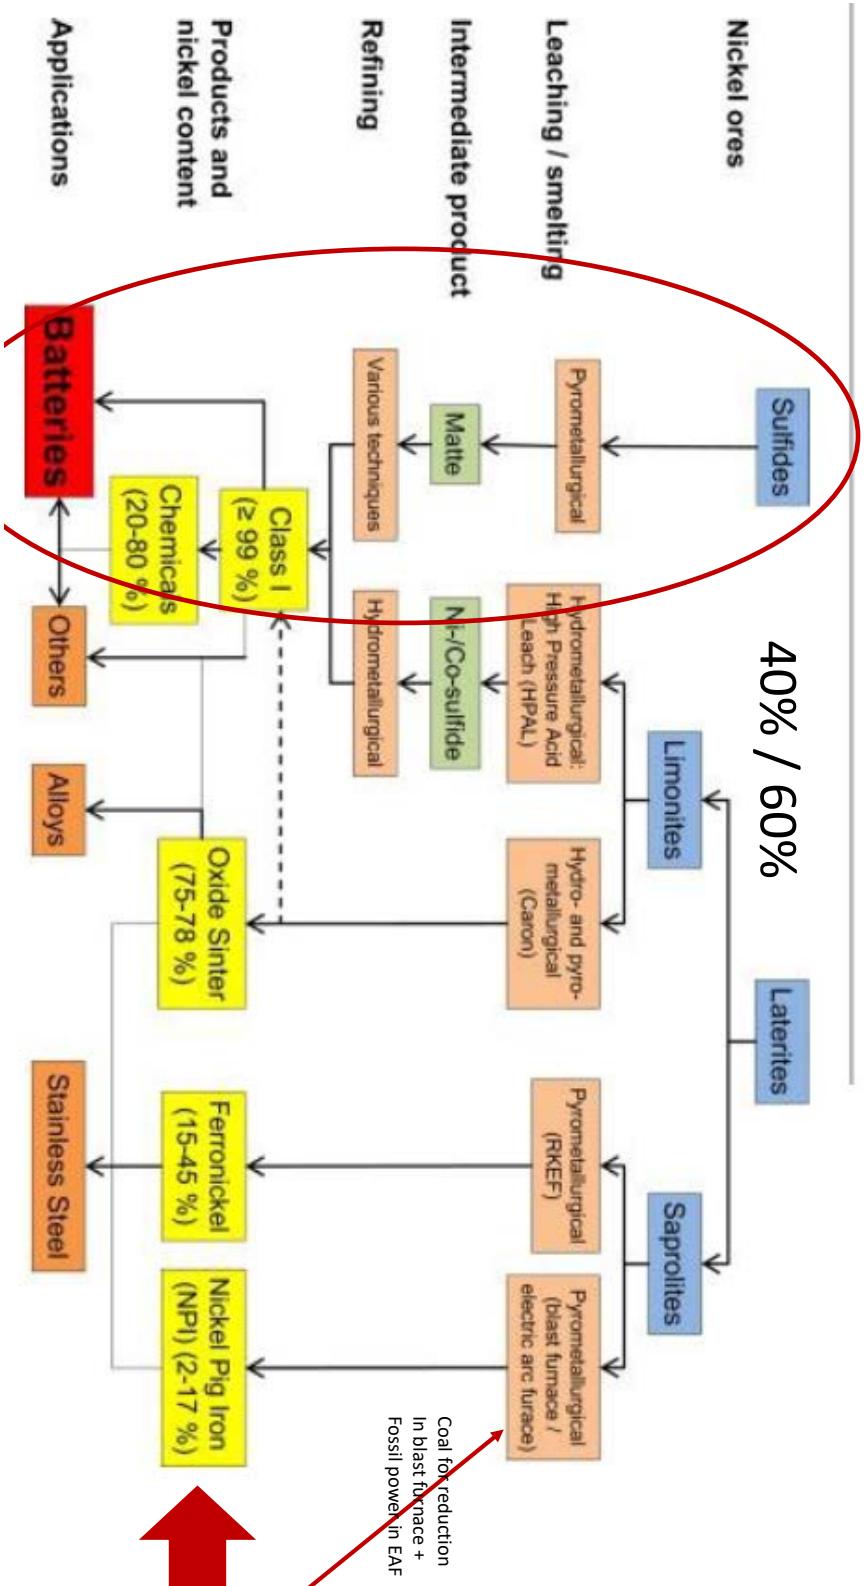

Global nickel consumption by first use, 2030  
Total market: 4.7mt

Source: INSG, Macquarie Commodities Strategy, October 2021

# How to cover the additional Nickel demand for batteries? Nickel is complicated...

## Nickel production routes

**BUT**

CO<sub>2</sub>-emissions per ton Ni via NPI  
3-10 times higher (40-80 t CO<sub>2</sub>-e/t Ni)  
than via sulfidic Ni (8-12 t CO<sub>2</sub>-e/t Ni)

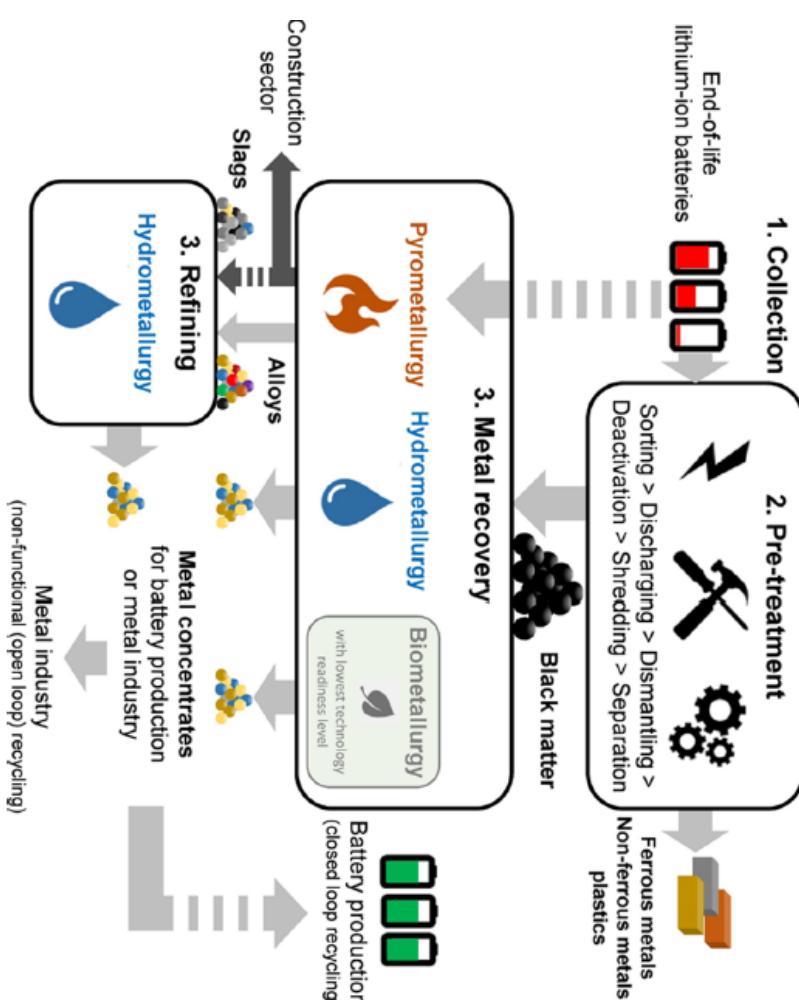

Significant growth in NPI production (SE-Asia) due to stainless steel production in China

# Update EU battery-directive (expected for July 2023)

- Minimum recycling rate:
  - 2026: 35 % Lithium, 90 % Nickel, Lead, Copper, Cobalt
  - 2030: 70 % Lithium, 95 % Nickel, Lead, Copper, Cobalt
- **Minimum share of recyclate:**
  - **2030: 12% Cobalt; 85% Lead; 4% Lithium; 4% Nickel**
  - **2035: 20 % Cobalt; 85 % Lead; 10 % Lithium; 12 % Nickel**
- Carbon Footprint-(CF) declaration [kg CO<sub>2</sub>-Äq/kWh] of total electricity stored during lifetime
  - from 1.7.2024: obligatory CF-declaration
  - from 1.1.2026: Classification based on CF-classes (t.b. defined by EC)
  - from 1.6.2027: Compliance with maximum CF (t.b. defined by EC)
  - valid also for imported batteries
- Reporting supply chains, social due diligence for Cobalt, Grafite, Lithium, Nickel (based on guideline UNEP S-LCA)
- IT-technologies – battery pass, EU-battery-database

# State-of-the-art processes and challenges of battery-recycling

- **Pre-treatment (State-of-the-art)**
  - Challenges: thermal runaway, reduced aluminium yield with higher temperatures
- **Pyrometallurgy (State-of-the-art)**
  - Challenges: metal recovery as alloy (Ni, Co, Cu), requires hydrometallurgical refining for metal recovery. Li, Mn, Al into slag (recovery is challenging), energy intensive process.
- **Hydrometallurgy (in development)**
  - Challenges: pre-treatment / sorting of different battery chemistries for constant process input, long process time, waste water treatment
- **Direct recycling (in development)**
  - Challenges: sorting of different chemistries, very sensitive to changes in input material
  - **Sequence and interplay of processes depending of input quality and chemistry, required quality of output material as biggest technical challenge to reach EU recycling targets**

## Findings

- Climate Neutrality 2040 in Austria passenger vehicle fleet is possible with BEV
- Main challenges are
  - rapid renewal of fleet with high share of BEV registration
  - Renewable power supply covering the demands of all sectors (mobility, industry, buildings)
- Main influences to reach climate goals in passenger vehicle fleet are:
  - Increasing high number of newly registered BEV
  - Development of vehicle stock
  - Development of annual driven mileage of vehicle fleet
  - Generation of additional renewable electricity for BEV
  - Climate neutral raw material processing in the main resource countries remains big challenge
- Next: discussion and scenarios for climate neutral mobility in Austria for persons & goods using all transportation modes

## Findings

## International Collaboration

CRITICAL RAW MATERIALS  
ELECTRIC VEHICLES

This work is done in the **Technology Collaboration Programme** (TCP) of the

**International Energy Agency** (IEA) on **Hybrid & Electric Vehicle** (HEV) in

Task 40 with JOANNEUM RESEARCH as Austrian representative.

- Task 40: CRM4EV Critical Raw Materials for Electric Vehicles (12 countries)

- The Austrian participation is funded by
- [www.ieahhev.org](http://www.ieahhev.org)
